

DWS INT 4

DIGI-WAVE™ LANGUAGE INTERPRETATION SYSTEM

[SIMULTANEOUS INTERPRETATION IN A BRIEFCASE]

NEW The DWS INT 4 is a completely portable, wireless system for language interpretation. Ideal when security, sound quality and flexibility are critical. Designed for small- to medium-size conferences, meetings or other events where one language is shared by two interpreters. System can serve up to

25 listeners. Additional DLT 100s can be purchased separately to accommodate up to 14 interpreted languages. Additional DLR 50s can be purchased separately to accommodate additional listeners. Can serve unlimited number of listeners within recommended range.

DWS INT 4

DIGI-WAVE™ LANGUAGE INTERPRETATION SYSTEM

DWS INT 4 is ideal for use in the following scenario:

1. Set up one DLT 100 transceiver as body-worn transmitter to provide a direct audio feed from speaker to two interpreters on CH 0. Interpreters 1 and 2 then use second and third DLT 100s to both listen to the speaker and take turns interpreting to the audience on CH 1. Each interpreter must toggle on/off by using the TALK button - leaving only one TALK button on at any one time. Audience, using DLR 50s, can tune in to CH 0 for hearing assistance or they can toggle back and forth between CH 0 for floor speaker and CH 1 for interpreted language.

FEATURES/BENEFITS

- Secure - 72-bit encryption, frequency hopping technology and PIN code access
